Small Business Solutions

Small business owners are looking for ways to reduce costs and increase efficiency. One way to do this is by using cloud-based software. This type of software allows businesses to access their data and applications from anywhere, at any time. This can be a great way to save money on IT infrastructure and improve collaboration among team members.

Another way to reduce costs is by using virtual private networks (VPNs). A VPN allows businesses to securely connect their devices to their corporate network. This can help protect sensitive data and prevent unauthorized access. Additionally, a VPN can help businesses save money on travel and accommodation costs by allowing employees to work remotely.

Finally, businesses can also reduce costs by using social media for marketing. Social media is a cost-effective way to reach a large audience and build brand awareness. Additionally, social media can be used to provide customer support and improve the overall customer experience.

DICE Corporation has signed a joint marketing agreement with **Airo Wireless Media, Inc. (Airo)**, exclusive North American trade partner of **Benefon Oyj** of Finland, a manufacturer of mobile telematics devices and GSM + GPS enabled handsets. The agreement allows DICE and Airo to jointly market each other's software and telematics products.

DICE is now offering **business continuity planning** as an extension of its alarm monitoring recovery services. It has developed a new data transfer method that will allow its disaster recovery clients to move not only their alarm monitoring data and operations, but also their accounting and service data to the Dice facility in the case of a disaster.
